

# IP7 Audio IP Paging and Intercom

## Overview

- ◆ The IP7 audio IP intercom and paging adapters from BC Technology allow intercom or paging over Ethernet IP local area (LAN) and wide area (WAN) networks.
- ◆ For intercom voice quality audio is delivered from a microphone and/or loudspeaker connected to the IP7 adapter to a computer. The computer operator can then communicate with the caller and take any necessary action.
- ◆ For paging the PC can send voice messages to selected, groups or all adapters to a network of paging speakers.
- ◆ TalkMaster software is available to allow scalability to the system. Ultimately, many hundreds of IP7 adapters can report to a suite of PCs.

## Applications

### ◆ Door Entry

The IP7 system is suited to door entry installations using door stations from the BC Technology range. The IP7 adapter has an on-board relay for door release.

### ◆ Help Points

The IP7 adapter can connect to a bespoke help point in order to summon assistance from remote car parks, railway stations, underground stations, motorways and other potentially dangerous areas.

### ◆ Intercom

The IP7 can be utilised as an intercom between remote areas and a central monitoring point. They can be used in schools, supermarkets, car parks etc.

### ◆ Paging Information Messages

IP7 adapters can be used in situations where information may be helpful. Supermarkets, leisure centres, railway and underground stations, airports etc.
